

Piper Seneca

Twin engine

Seating: 1+3

Cruise speed: 155 knots (285 km/h)

Range: 1650 km (max fuel) - 1090 km (max passengers)

Safe, Comfortable, Reliable, Secure

The Piper Seneca is a twin-engined aircraft primarily used for personal and business commuter flying. One of the enduring 'workhorses' of the air charter industry, this non-pressurised, light-twin has seating for 3 adults, or 2 adults and 2 small children and is flown by a single pilot.

Often used for scenic flights from our Albury base, the Seneca is the perfect choice to transport small groups of passengers over shorter distances. The Seneca is also ideally suited for operations out of short bush strips. This efficient and versatile aircraft is powerful and reliable, and is all-weather capable. The eminently practical Seneca is the more economical charter alternative to our larger Navajo.

Think of the time and money you can save by chartering your own aircraft. Day or night, the Piper Seneca has the ability to get you where you need to go without any of the luggage and check-in hassles associated with commercial air travel.

Work smarter, charter your own aircraft.
